LECTURE NOTES IN CIS300 YUZHE (RICHARD) TANG SPRING, 2018

SECTION 2: C/C++ PROGRAMMING

REFERENCES

- "Unix Programming Tools", [link]
- Computer Systems: A Programmer's Perspective, Randal E. Bryant and David R. O'Hallaron, Chapter 1, [online pdf]

HELLOWORLD C

```
#include <stdio.h> //preprocessor
int y = 3; //global var. (def. & init.)
//extern int y; //global var. (dec.)
int main() //function (def.)
{
   int x = 0; //local var. (def. & init.), literal,
   printf("helloworld: y = %d\n",y); //function (invocation)
   return 0;
}
```

- printf: format string
- header files

LIFE OF A C CONSTRUCT

	variable	function
declare	extern int x;	<pre>void foo();</pre>
define	int x;	<pre>void foo(){}</pre>
initialize	int $x=6;$	
reference	y=x;x=1;	foo(); (invocation)
destroy		

COMPILATION & EXECUTION: BASICS

In your terminal, run the following commands

gcc helloworld.c
./a.out

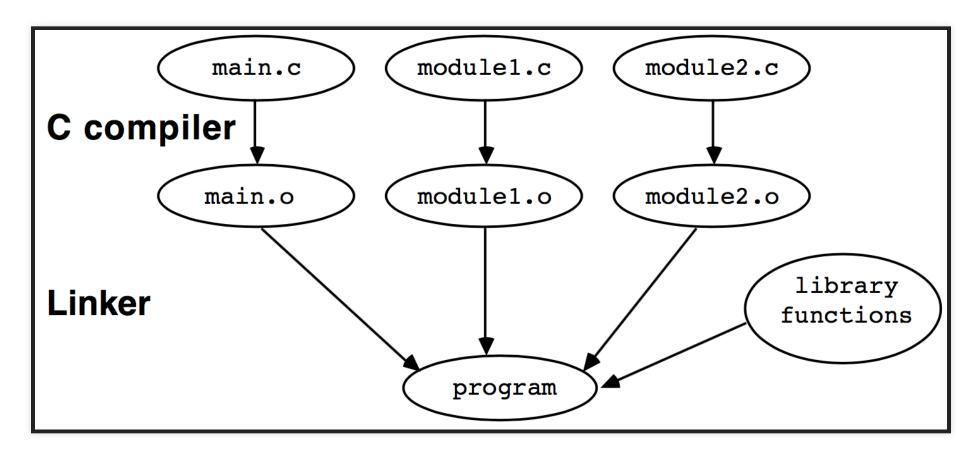

EXERCISES

- Write a C program that prints out your name. Compile and execute it in Ubuntu. Submit the C program to BB.
- Write a C program that computes the sum of 1,2,3,...,956.
 Compile and execute the program in Ubuntu. Submit the C program to BB.

GCC & MAKE

COMPILATION OVERVIEW

- Two steps of compilation:
 - compiling: text .c file to relocatable .o (object) file
 - linking: multiple relocatable .o files to one executable .o file
 - symbol: reference to link construct (declaration) in one
 o file to construct (definition) in another . o file

Linker

GCC: FLAGS

- -c for compile, -o for output
- –Wall, w for warning
- -I for #include
 - header file (storing declarations)
- -Ldir/-lmylib for library to link
 - search library for unsolved symbols (functions, global variables) when linking
- –g for debug (later)
- ref [link]
